APP INFORMATION

App Name: TikTok

Package Name: com.ss.android.ugc.trill

Main Activity: com.kakao.auth.authorization.authcode.KakaoWebViewActivity

Target SDK: 28

Min SDK: 16

Max SDK:

Android Version Name: 10.0.9

Android Version Code: 100009

PLAY STORE INFORMATION

Title: TikTok

Score: None **Installs:** 100,000,000+ **Price:** 0 **Android Version Support:** 4.1 and up **Category:** Video Players & Editors **Play Store URL:**

Developer Details: TikTok Pte. Ltd., TikTok+Pte.+Ltd., 201 Henderson Road #06-22,

Apex@Henderson Singapore, SGP, https://www.tiktok.com/, feedback@tiktok.com,

Release Date: May 7, 2017 **Privacy Policy:** [Privacy link](#)

Description:

TikTok is a global video community powered by music. Whether it's dance, free

[Facial Recognition]
High-speed image capture and perfect facial feature matching for all your cut

[Crisp Quality]
Load instantly, smooth interface, and lag free.
Every detail displayed in perfect quality.
Your eyes will thank you and your mom will love you.

[Mobile Studio]
The perfect marriage between artificial intelligence and image capturing.
Enhancing product offering through rhythm synchronization, special effects, a
Turn your phone into a full-blown creative studio.

[Massive Music Library]
A sea of music library with fresh editor's pick daily.
Take your creative potential to the next level and unlock the world of endles

[Gaga Dance]
Gaga Dance launched! Start a Gaga Dance competition with your friends！How man

PERMISSIONS

PERMISSION	STATUS	INFO	DESCRIPTION

PERMISSION	STATUS	INFO	DESCRIPTION
android.permission.ACCESS_FINE_LOCATION	dangerous	fine (GPS) location	Access fine location sources, such as the Global Positioning System on the phone, where available. Malicious applications can use this to determine where you are and may consume additional battery power.
android.permission.ACCESS_COARSE_LOCATION	dangerous	coarse (network-based) location	Access coarse location sources, such as the mobile network database, to determine an approximate phone location, where available. Malicious applications can use this to determine approximately where you are.
android.permission.INTERNET	dangerous	full Internet access	Allows an application to create network sockets.
android.permission.READ_PHONE_STATE	dangerous	read phone state and identity	Allows the application to access the phone features of the device. An application with this permission can determine the phone number and serial number of this phone, whether a call is active, the number that call is connected to and so on.
android.permission.ACCESS_NETWORK_STATE	normal	view network status	Allows an application to view the status of all networks.
android.permission.READ_EXTERNAL_STORAGE	dangerous	read SD card contents	Allows an application to read from SD Card.
android.permission.WRITE_EXTERNAL_STORAGE	dangerous	read/modify/delete SD card contents	Allows an application to write to the SD card.
android.permission.ACCESS_WIFI_STATE	normal	view Wi-Fi status	Allows an application to view the information about the status of Wi-Fi.
android.permission.CAMERA	dangerous	take pictures and videos	Allows application to take pictures and videos with the camera. This allows the application to collect images that the camera is seeing at any time.
android.permission.RECORD_AUDIO	dangerous	record audio	Allows application to access the audio record path.
android.permission.FLASHLIGHT	normal	control flashlight	Allows the application to control the flashlight.
android.permission.WAKE_LOCK	dangerous	prevent phone from sleeping	Allows an application to prevent the phone from going to sleep.
android.permission.GET_TASKS	dangerous	retrieve running applications	Allows application to retrieve information about currently and recently running tasks. May allow malicious applications to discover private information about other applications.
android.permission.READ_CONTACTS	dangerous	read contact data	Allows an application to read all of the contact (address) data stored on your phone. Malicious applications can use this to send your data to other people.
android.permission.RECEIVE_BOOT_COMPLETED	normal	automatically start at boot	Allows an application to start itself as soon as the system has finished booting. This can make it take longer to start the phone and allow the application to slow down the overall phone by always running.
android.permission.VIBRATE	normal	control vibrator	Allows the application to control the vibrator.
com.meizu.c2dm.permission.RECEIVE	signature	C2DM permissions	Permission for cloud to device messaging.
com.ss.android.ugc.trill.permission.READ_ACCOUNT	dangerous	Unknown permission from android reference	Unknown permission from android reference
com.ss.android.ugc.trill.permission.WRITE_ACCOUNT	dangerous	Unknown permission from android reference	Unknown permission from android reference
com.android.launcher.permission.INSTALL_SHORTCUT	normal		Allows an application to install a shortcut in Launcher.
com.android.launcher.permission.UNINSTALL_SHORTCUT	normal		Don't use this permission in your app. This permission is no longer supported.
com.android.launcher.permission.READ_SETTINGS	dangerous	Unknown permission from android reference	Unknown permission from android reference
android.permission.AUTHENTICATE_ACCOUNTS	dangerous	act as an account authenticator	Allows an application to use the account authenticator capabilities of the Account Manager, including creating accounts as well as obtaining and setting their passwords.
com.htc.launcher.permission.READ_SETTINGS	dangerous	Unknown permission from android reference	Unknown permission from android reference
com.lge.launcher.permission.READ_SETTINGS	dangerous	Unknown permission from android reference	Unknown permission from android reference
com.lge.launcher.permission.WRITE_SETTINGS	dangerous	modify global system settings	Allows an application to modify the system's settings data. Malicious applications can corrupt your system's configuration.
com.huawei.launcher3.permission.READ_SETTINGS	dangerous	Unknown permission from android reference	Unknown permission from android reference
com.huawei.launcher3.permission.WRITE_SETTINGS	dangerous	modify global system settings	Allows an application to modify the system's settings data. Malicious applications can corrupt your system's configuration.
com.huawei.launcher2.permission.READ_SETTINGS	dangerous	Unknown permission from android reference	Unknown permission from android reference
com.huawei.launcher2.permission.WRITE_SETTINGS	dangerous	modify global system settings	Allows an application to modify the system's settings data. Malicious applications can corrupt your system's configuration.
com.ebproductions.android.launcher.permission.READ_SETTINGS	dangerous	Unknown permission from android reference	Unknown permission from android reference
com.ebproductions.android.launcher.permission.WRITE_SETTINGS	dangerous	modify global system settings	Allows an application to modify the system's settings data. Malicious applications can corrupt your system's configuration.
com.oppo.launcher.permission.READ_SETTINGS	dangerous	Unknown permission from android reference	Unknown permission from android reference
com.oppo.launcher.permission.WRITE_SETTINGS	dangerous	modify global system settings	Allows an application to modify the system's settings data. Malicious applications can corrupt your system's configuration.
com.huawei.android.launcher.permission.READ_SETTINGS	dangerous	Unknown permission from android reference	Unknown permission from android reference
com.huawei.android.launcher.permission.WRITE_SETTINGS	dangerous	modify global system settings	Allows an application to modify the system's settings data. Malicious applications can corrupt your system's configuration.
dianxin.permission.ACCESS_LAUNCHER_DATA	dangerous	Unknown permission from android reference	Unknown permission from android reference

PERMISSION	STATUS	INFO	DESCRIPTION
com.miui.mihome2.permission.READ_SETTINGS	dangerous	Unknown permission from android reference	Unknown permission from android reference
com.miui.mihome2.permission.WRITE_SETTINGS	dangerous	modify global system settings	Allows an application to modify the system's settings data. Malicious applications can corrupt your system's configuration.
android.permission.FOREGROUND_SERVICE	normal		Allows a regular application to use Service.startForeground
com.ss.android.ugc.trill.permission.MIPUSH_RECEIVE	dangerous	Unknown permission from android reference	Unknown permission from android reference
com.ss.android.ugc.trill.push.permission.MESSAGE	dangerous	Unknown permission from android reference	Unknown permission from android reference
com.meizu.flyme.push.permission.RECEIVE	signature	C2DM permissions	Permission for cloud to device messaging.
android.permission.WRITE_SYNC_SETTINGS	dangerous	write sync settings	Allows an application to modify the sync settings, such as whether sync is enabled for Contacts.
com.sec.android.provider.badge.permission.READ	dangerous	Unknown permission from android reference	Unknown permission from android reference
com.sec.android.provider.badge.permission.WRITE	dangerous	Unknown permission from android reference	Unknown permission from android reference
com.htc.launcher.permission.UPDATE_SHORTCUT	dangerous	Unknown permission from android reference	Unknown permission from android reference
com.sonyericsson.home.permission.BROADCAST_BADGE	dangerous	Unknown permission from android reference	Unknown permission from android reference
com.sonymobile.home.permission.PROVIDER_INSERT_BADGE	dangerous	Unknown permission from android reference	Unknown permission from android reference
com.majeur.launcher.permission.UPDATE_BADGE	dangerous	Unknown permission from android reference	Unknown permission from android reference
com.huawei.android.launcher.permission.CHANGE_BADGE	dangerous	Unknown permission from android reference	Unknown permission from android reference
com.android.vending.BILLING	dangerous	Unknown permission from android reference	Unknown permission from android reference
android.permission.MODIFY_AUDIO_SETTINGS	dangerous	change your audio settings	Allows application to modify global audio settings, such as volume and routing.
android.permission.EXPAND_STATUS_BAR	normal	expand/collapse status bar	Allows application to expand or collapse the status bar.
android.permission.REQUEST_INSTALL_PACKAGES	dangerous	Allows an application to request installing packages.	Malicious applications can use this to try and trick users into installing additional malicious packages.
android.permission.REORDER_TASKS	dangerous	reorder applications running	Allows an application to move tasks to the foreground and background. Malicious applications can force themselves to the front without your control.
com.ss.android.ugc.trill.miniapp.PROCESS_COMMUNICATION	dangerous	Unknown permission from android reference	Unknown permission from android reference
com.google.android.finsky.permission.BIND_GET_INSTALL_REFERRER_SERVICE	dangerous	Unknown permission from android reference	Unknown permission from android reference
com.google.android.c2dm.permission.RECEIVE	signature	C2DM permissions	Permission for cloud to device messaging.
android.permission.READ_APP_BADGE	dangerous	Unknown permission from android reference	Unknown permission from android reference
me.everything.badger.permission.BADGE_COUNT_READ	dangerous	Unknown permission from android reference	Unknown permission from android reference
me.everything.badger.permission.BADGE_COUNT_WRITE	dangerous	Unknown permission from android reference	Unknown permission from android reference
android.permission.UPDATE_APP_BADGE	dangerous	Unknown permission from android reference	Unknown permission from android reference
com.vivo.notification.permission.BADGE_ICON	dangerous	Unknown permission from android reference	Unknown permission from android reference
com.ss.android.ugc.trill.permission.RECEIVE_ADM_MESSAGE	dangerous	Unknown permission from android reference	Unknown permission from android reference
com.amazon.device.messaging.permission.RECEIVE	signature	C2DM permissions	Permission for cloud to device messaging.
android.permission.USE_CREDENTIALS	dangerous	use the authentication credentials of an account	Allows an application to request authentication tokens.
android.permission.MANAGE_ACCOUNTS	dangerous	manage the accounts list	Allows an application to perform operations like adding and removing accounts and deleting their password.

MANIFEST ANALYSIS

ISSUE	SEVERITY	DESCRIPTION
App has a Network Security Configuration [android:networkSecurityConfig]	info	The Network Security Configuration feature lets apps customize their network security settings in a safe, declarative configuration file without modifying app code. These settings can be configured for specific domains and for a specific app.
Launch Mode of Activity (com.ss.android.ugc.aweme.share.ShareScreenShotActivity) is not standard.	high	An Activity should not be having the launch mode attribute set to "singleTask/singleInstance" as it becomes root Activity and it is possible for other applications to read the contents of the calling Intent. So it is required to use the "standard" launch mode attribute when sensitive information is included in an Intent.
Launch Mode of Activity (com.ss.android.ugc.trill.openauthorize.AwemeAuthorizedActivity) is not standard.	high	An Activity should not be having the launch mode attribute set to "singleTask/singleInstance" as it becomes root Activity and it is possible for other applications to read the contents of the calling Intent. So it is required to use the "standard" launch mode attribute when sensitive information is included in an Intent.
Activity (com.ss.android.ugc.trill.openauthorize.AwemeAuthorizedActivity) is not Protected. [android:exported=true]	high	An Activity is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device.
Activity (net.openid.appauth.RedirectUriReceiverActivity) is not Protected. An intent-filter exists.	high	An Activity is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device. The presence of intent-filter indicates that the Activity is explicitly exported.
Launch Mode of Activity (com.ss.android.ugc.aweme.app.AppLinkHandler) is not standard.	high	An Activity should not be having the launch mode attribute set to "singleTask/singleInstance" as it becomes root Activity and it is possible for other applications to read the contents of the calling Intent. So it is required to use the "standard" launch mode attribute when sensitive information is included in an Intent.
Activity (com.ss.android.ugc.aweme.app.AppLinkHandler) is not Protected. An intent-filter exists.	high	An Activity is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device. The presence of intent-filter indicates that the Activity is explicitly exported.
Launch Mode of Activity (com.ss.android.ugc.aweme.share.SystemShareActivity) is not standard.	high	An Activity should not be having the launch mode attribute set to "singleTask/singleInstance" as it becomes root Activity and it is possible for other applications to read the contents of the calling Intent. So it is required to use the "standard" launch mode attribute when sensitive information is included in an Intent.
Activity (com.ss.android.ugc.aweme.share.SystemShareActivity) is not Protected. An intent-filter exists.	high	An Activity is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device. The presence of intent-filter indicates that the Activity is explicitly exported.
Launch Mode of Activity (com.tencent.tauth.AuthActivity) is not standard.	high	An Activity should not be having the launch mode attribute set to "singleTask/singleInstance" as it becomes root Activity and it is possible for other applications to read the contents of the calling Intent. So it is required to use the "standard" launch mode attribute when sensitive information is included in an Intent.
Activity (com.tencent.tauth.AuthActivity) is not Protected. An intent-filter exists.	high	An Activity is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device. The presence of intent-filter indicates that the Activity is explicitly exported.
Activity (com.ss.android.ugc.aweme.detail.ui.DetailActivity) is not Protected. An intent-filter exists.	high	An Activity is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device. The presence of intent-filter indicates that the Activity is explicitly exported.
Launch Mode of Activity (com.ss.android.ugc.aweme.app.LogListActivity) is not standard.	high	An Activity should not be having the launch mode attribute set to "singleTask/singleInstance" as it becomes root Activity and it is possible for other applications to read the contents of the calling Intent. So it is required to use the "standard" launch mode attribute when sensitive information is included in an Intent.
Launch Mode of Activity (com.ss.android.ugc.aweme.app.debug.AbTestSettingActivity) is not standard.	high	An Activity should not be having the launch mode attribute set to "singleTask/singleInstance" as it becomes root Activity and it is possible for other applications to read the contents of the calling Intent. So it is required to use the "standard" launch mode attribute when sensitive information is included in an Intent.
Launch Mode of Activity (com.ss.android.ugc.aweme.account.ui.RecoverAccountActivity) is not standard.	high	An Activity should not be having the launch mode attribute set to "singleTask/singleInstance" as it becomes root Activity and it is possible for other applications to read the contents of the calling Intent. So it is required to use the "standard" launch mode attribute when sensitive information is included in an Intent.

ISSUE	SEVERITY	DESCRIPTION
Launch Mode of Activity (com.ss.android.ugc.aweme.app.DeepLinkHandlerActivity) is not standard.	high	An Activity should not be having the launch mode attribute set to "singleTask/singleInstance" as it becomes root Activity and it is possible for other applications to read the contents of the calling Intent. So it is required to use the "standard" launch mode attribute when sensitive information is included in an Intent.
Activity (com.ss.android.ugc.aweme.app.DeepLinkHandlerActivity) is not Protected. An intent-filter exists.	high	An Activity is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device. The presence of intent-filter indicates that the Activity is explicitly exported.
Broadcast Receiver (com.ss.android.ugc.aweme.common.net.NetworkReceiver) is not Protected. An intent-filter exists.	high	A Broadcast Receiver is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device. The presence of intent-filter indicates that the Broadcast Receiver is explicitly exported.
Launch Mode of Activity (com.ss.android.ugc.aweme.mobile.EditProfileActivityV2) is not standard.	high	An Activity should not be having the launch mode attribute set to "singleTask/singleInstance" as it becomes root Activity and it is possible for other applications to read the contents of the calling Intent. So it is required to use the "standard" launch mode attribute when sensitive information is included in an Intent.
Launch Mode of Activity (com.ss.android.ugc.aweme.login.ui.RecommendFriendActivity) is not standard.	high	An Activity should not be having the launch mode attribute set to "singleTask/singleInstance" as it becomes root Activity and it is possible for other applications to read the contents of the calling Intent. So it is required to use the "standard" launch mode attribute when sensitive information is included in an Intent.
Broadcast Receiver (com.ss.android.common.applog.HotsoonReceiver) is not Protected. An intent-filter exists.	high	A Broadcast Receiver is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device. The presence of intent-filter indicates that the Broadcast Receiver is explicitly exported.
Launch Mode of Activity (com.ss.android.ugc.aweme.ttplatformapi.TtAuthorizeActivity) is not standard.	high	An Activity should not be having the launch mode attribute set to "singleTask/singleInstance" as it becomes root Activity and it is possible for other applications to read the contents of the calling Intent. So it is required to use the "standard" launch mode attribute when sensitive information is included in an Intent.
Activity (com.ss.android.ugc.aweme.ttplatformapi.TtAuthorizeActivity) is not Protected. [android:exported=true]	high	An Activity is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device.
Content Provider (com.ss.android.ttplatformsdk.provider.TTPlatformAccountProvider) is not Protected. [android:exported=true]	high	A Content Provider is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device.
Content Provider (com.ss.android.ugc.aweme.livewallpaper.WallPaperDataProvider) is not Protected. [android:exported=true]	high	A Content Provider is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device.
Service (com.ss.android.ugc.aweme.livewallpaper.AmeLiveWallpaper) is Protected by a permission, but the protection level of the permission should be checked. **Permission:** android.permission.BIND_WALLPAPER [android:exported=true]	high	A Service is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device. It is protected by a permission which is not defined in the analysed application. As a result, the protection level of the permission should be checked where it is defined. If it is set to normal or dangerous, a malicious application can request and obtain the permission and interact with the component. If it is set to signature, only applications signed with the same certificate can obtain the permission.
Activity (com.ss.android.ugc.aweme.livewallpaper.ui.LiveWallPaperPreviewActivity) is not Protected. [android:exported=true]	high	An Activity is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device.
Broadcast Receiver (com.ss.android.ugc.aweme.livewallpaper.receiver.LiveWallPaperPluginInstalledReceiver) is not Protected. An intent-filter exists.	high	A Broadcast Receiver is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device. The presence of intent-filter indicates that the Broadcast Receiver is explicitly exported.
Service (com.ss.ttm.player.TTPlayerService) is not Protected. [android:exported=true]	high	A Service is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device.
Broadcast Receiver (com.ss.android.socialbase.downloader.downloader.DownloadReceiver) is not Protected. An intent-filter exists.	high	A Broadcast Receiver is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device. The presence of intent-filter indicates that the Broadcast Receiver is explicitly exported.
Activity-Alias (com.ss.android.ugc.aweme.splash.SplashActivity) is not Protected. An intent-filter exists.	high	An Activity-Alias is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device. The presence of intent-filter indicates that the Activity-Alias is explicitly exported.
Launch Mode of Activity (com.ss.android.ugc.trill.main.shortcut.ShortcutShootingActivity) is not standard.	high	An Activity should not be having the launch mode attribute set to "singleTask/singleInstance" as it becomes root Activity and it is possible for other applications to read the contents of the calling Intent. So it is required to use the "standard" launch mode attribute when sensitive information is included in an Intent.
Launch Mode of Activity (com.ss.android.ugc.trill.main.shortcut.ShortcutMessageActivity) is not standard.	high	An Activity should not be having the launch mode attribute set to "singleTask/singleInstance" as it becomes root Activity and it is possible for other applications to read the contents of the calling Intent. So it is required to use the "standard" launch mode attribute when sensitive information is included in an Intent.
Launch Mode of Activity (com.ss.android.ugc.trill.main.shortcut.ShortcutTrendingActivity) is not standard.	high	An Activity should not be having the launch mode attribute set to "singleTask/singleInstance" as it becomes root Activity and it is possible for other applications to read the contents of the calling Intent. So it is required to use the "standard" launch mode attribute when sensitive information is included in an Intent.
Launch Mode of Activity (com.ss.android.ugc.aweme.comment.share.I18nCommentShareActivity) is not standard.	high	An Activity should not be having the launch mode attribute set to "singleTask/singleInstance" as it becomes root Activity and it is possible for other applications to read the contents of the calling Intent. So it is required to use the "standard" launch mode attribute when sensitive information is included in an Intent.
Service (com.ss.android.ugc.trill.account.TiktokAuthService) is not Protected. [android:exported=true]	high	A Service is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device.
Broadcast Receiver (com.appsflyer.MultipleInstallBroadcastReceiver) is not Protected. [android:exported=true]	high	A Broadcast Receiver is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device.
Broadcast Receiver (com.appsflyer.SingleInstallBroadcastReceiver) is not Protected. [android:exported=true]	high	A Broadcast Receiver is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device.

ISSUE	SEVERITY	DESCRIPTION
Broadcast Receiver (com.ss.android.ugc.trill.abtest.impl.NotificationBroadcastReceiver) is not Protected. An intent-filter exists.	high	A Broadcast Receiver is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device. The presence of intent-filter indicates that the Broadcast Receiver is explicitly exported.
Broadcast Receiver (com.bytedance.ttnet.hostmonitor.ConnectivityReceiver) is not Protected. An intent-filter exists.	high	A Broadcast Receiver is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device. The presence of intent-filter indicates that the Broadcast Receiver is explicitly exported.
Content Provider (com.ss.android.common.util.MultiProcessSharedProvider) is not Protected. [android:exported=true]	high	A Content Provider is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device.
Broadcast Receiver (com.ss.android.ugc.aweme.common.net.NetWorkStateReceiver) is not Protected. An intent-filter exists.	high	A Broadcast Receiver is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device. The presence of intent-filter indicates that the Broadcast Receiver is explicitly exported.
Launch Mode of Activity (com.ss.android.ugc.aweme.app.PushCameraBlurActivity) is not standard.	high	An Activity should not be having the launch mode attribute set to "singleTask/singleInstance" as it becomes root Activity and it is possible for other applications to read the contents of the calling Intent. So it is required to use the "standard" launch mode attribute when sensitive information is included in an Intent.
Launch Mode of Activity (com.ss.android.ugc.aweme.antiaddic.lock.ui.TimeUnlockActivity) is not standard.	high	An Activity should not be having the launch mode attribute set to "singleTask/singleInstance" as it becomes root Activity and it is possible for other applications to read the contents of the calling Intent. So it is required to use the "standard" launch mode attribute when sensitive information is included in an Intent.
Broadcast Receiver (com.ss.android.message.MessageReceiver) is not Protected. An intent-filter exists.	high	A Broadcast Receiver is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device. The presence of intent-filter indicates that the Broadcast Receiver is explicitly exported.
Broadcast Receiver (com.ss.android.downloadlib.core.download.DownloadReceiver) is not Protected. An intent-filter exists.	high	A Broadcast Receiver is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device. The presence of intent-filter indicates that the Broadcast Receiver is explicitly exported.
Broadcast Receiver (com.ss.android.socialbase.appdownloader.DownloadReceiver) is not Protected. An intent-filter exists.	high	A Broadcast Receiver is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device. The presence of intent-filter indicates that the Broadcast Receiver is explicitly exported.
Launch Mode of Activity (com.ss.android.ugc.aweme.journey.NewUserJourneyActivity) is not standard.	high	An Activity should not be having the launch mode attribute set to "singleTask/singleInstance" as it becomes root Activity and it is possible for other applications to read the contents of the calling Intent. So it is required to use the "standard" launch mode attribute when sensitive information is included in an Intent.
Service (com.ss.android.ugc.aweme.tile.PublishTileService) is Protected by a permission, but the protection level of the permission should be checked. **Permission:** android.permission.BIND_QUICK_SETTINGS_TILE [android:exported=true]	high	A Service is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device. It is protected by a permission which is not defined in the analysed application. As a result, the protection level of the permission should be checked where it is defined. If it is set to normal or dangerous, a malicious application can request and obtain the permission and interact with the component. If it is set to signature, only applications signed with the same certificate can obtain the permission.
Service (com.ss.android.ugc.aweme.tile.HotVideoTileService) is Protected by a permission, but the protection level of the permission should be checked. **Permission:** android.permission.BIND_QUICK_SETTINGS_TILE [android:exported=true]	high	A Service is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device. It is protected by a permission which is not defined in the analysed application. As a result, the protection level of the permission should be checked where it is defined. If it is set to normal or dangerous, a malicious application can request and obtain the permission and interact with the component. If it is set to signature, only applications signed with the same certificate can obtain the permission.
Broadcast Receiver (com.ss.android.ugc.aweme.share.systemshare.SystemShareTargetChosenReceiver) is not Protected. An intent-filter exists.	high	A Broadcast Receiver is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device. The presence of intent-filter indicates that the Broadcast Receiver is explicitly exported.
Activity (com.ss.android.sdk.activity.BootstrapActivity) is not Protected. An intent-filter exists.	high	An Activity is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device. The presence of intent-filter indicates that the Activity is explicitly exported.
Launch Mode of Activity (com.ss.android.ugc.aweme.live.LiveBgBroadcastActivity) is not standard.	high	An Activity should not be having the launch mode attribute set to "singleTask/singleInstance" as it becomes root Activity and it is possible for other applications to read the contents of the calling Intent. So it is required to use the "standard" launch mode attribute when sensitive information is included in an Intent.
Launch Mode of Activity (com.ss.android.ugc.aweme.live.LivePlayActivity) is not standard.	high	An Activity should not be having the launch mode attribute set to "singleTask/singleInstance" as it becomes root Activity and it is possible for other applications to read the contents of the calling Intent. So it is required to use the "standard" launch mode attribute when sensitive information is included in an Intent.
Launch Mode of Activity (com.ss.android.ugc.aweme.app.LiveBroadcastSigningActivity) is not standard.	high	An Activity should not be having the launch mode attribute set to "singleTask/singleInstance" as it becomes root Activity and it is possible for other applications to read the contents of the calling Intent. So it is required to use the "standard" launch mode attribute when sensitive information is included in an Intent.
Launch Mode of Activity (com.ss.android.ugc.aweme.miniapp.MiniAppListH5Activity) is not standard.	high	An Activity should not be having the launch mode attribute set to "singleTask/singleInstance" as it becomes root Activity and it is possible for other applications to read the contents of the calling Intent. So it is required to use the "standard" launch mode attribute when sensitive information is included in an Intent.
Service (com.ss.android.http.OpenUrlService) is not Protected. An intent-filter exists.	high	A Service is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device. The presence of intent-filter indicates that the Service is explicitly exported.
Service (com.ss.android.message.NotifyService) is not Protected. [android:exported=true]	high	A Service is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device.
Service (com.ss.android.message.log.LogService) is not Protected. [android:exported=true]	high	A Service is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device.

ISSUE	SEVERITY	DESCRIPTION
TaskAffinity is set for Activity (com.ss.android.message.sswo.SswoActivity)	high	If taskAffinity is set, then other application could read the Intents sent to Activities belonging to another task. Always use the default setting keeping the affinity as the package name in order to prevent sensitive information inside sent or received Intents from being read by another application.
Launch Mode of Activity (com.ss.android.message.sswo.SswoActivity) is not standard.	high	An Activity should not be having the launch mode attribute set to "singleTask/singleInstance" as it becomes root Activity and it is possible for other applications to read the contents of the calling Intent. So it is required to use the "standard" launch mode attribute when sensitive information is included in an Intent.
Service (com.igexin.sdk.PushService) is not Protected. [android:exported=true]	high	A Service is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device.
Broadcast Receiver (com.igexin.sdk.PushReceiver) is not Protected. [android:exported=true]	high	A Broadcast Receiver is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device.
Broadcast Receiver (com.ss.android.ugc.awemepushlib.os.receiver.NotificationBroadcastReceiver) is not Protected. An intent-filter exists.	high	A Broadcast Receiver is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device. The presence of intent-filter indicates that the Broadcast Receiver is explicitly exported.
Service (cn.jpush.android.service.DaemonService) is not Protected. [android:exported=true]	high	A Service is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device.
Launch Mode of Activity (com.ss.android.ugc.aweme.im.sdk.chat.ChatRoomActivity) is not standard.	high	An Activity should not be having the launch mode attribute set to "singleTask/singleInstance" as it becomes root Activity and it is possible for other applications to read the contents of the calling Intent. So it is required to use the "standard" launch mode attribute when sensitive information is included in an Intent.
Launch Mode of Activity (com.ss.android.ugc.aweme.im.sdk.module.session.SessionListActivity) is not standard.	high	An Activity should not be having the launch mode attribute set to "singleTask/singleInstance" as it becomes root Activity and it is possible for other applications to read the contents of the calling Intent. So it is required to use the "standard" launch mode attribute when sensitive information is included in an Intent.
Launch Mode of Activity (com.ss.android.ugc.aweme.tools.draft.DraftBoxActivity) is not standard.	high	An Activity should not be having the launch mode attribute set to "singleTask/singleInstance" as it becomes root Activity and it is possible for other applications to read the contents of the calling Intent. So it is required to use the "standard" launch mode attribute when sensitive information is included in an Intent.
Service (com.ss.android.ugc.aweme.tools.policysecurity.OriginalSoundUploadService) is Protected by a permission, but the protection level of the permission should be checked. **Permission:** android.permission.BIND_JOB_SERVICE [android:exported=true]	high	A Service is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device. It is protected by a permission which is not defined in the analysed application. As a result, the protection level of the permission should be checked where it is defined. If it is set to normal or dangerous, a malicious application can request and obtain the permission and interact with the component. If it is set to signature, only applications signed with the same certificate can obtain the permission.
Service (com.ss.android.ugc.aweme.tools.extract.upload.VideoFramesUploadService) is Protected by a permission, but the protection level of the permission should be checked. **Permission:** android.permission.BIND_JOB_SERVICE [android:exported=true]	high	A Service is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device. It is protected by a permission which is not defined in the analysed application. As a result, the protection level of the permission should be checked where it is defined. If it is set to normal or dangerous, a malicious application can request and obtain the permission and interact with the component. If it is set to signature, only applications signed with the same certificate can obtain the permission.
Launch Mode of Activity (com.ss.android.ugc.aweme.shortvideo.ui.VideoPublishActivity) is not standard.	high	An Activity should not be having the launch mode attribute set to "singleTask/singleInstance" as it becomes root Activity and it is possible for other applications to read the contents of the calling Intent. So it is required to use the "standard" launch mode attribute when sensitive information is included in an Intent.
Launch Mode of Activity (com.ss.android.ugc.aweme.shortvideo.ui.VideoRecordPermissionActivity) is not standard.	high	An Activity should not be having the launch mode attribute set to "singleTask/singleInstance" as it becomes root Activity and it is possible for other applications to read the contents of the calling Intent. So it is required to use the "standard" launch mode attribute when sensitive information is included in an Intent.
Activity (com.ss.android.ugc.aweme.shortvideo.ui.VideoRecordPermissionActivity) is not Protected. An intent-filter exists.	high	An Activity is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device. The presence of intent-filter indicates that the Activity is explicitly exported.
Launch Mode of Activity (com.ss.android.ugc.aweme.shortvideo.ui.VideoRecordNewActivity) is not standard.	high	An Activity should not be having the launch mode attribute set to "singleTask/singleInstance" as it becomes root Activity and it is possible for other applications to read the contents of the calling Intent. So it is required to use the "standard" launch mode attribute when sensitive information is included in an Intent.
Content Provider (com.facebook.FacebookContentProvider) is not Protected. [android:exported=true]	high	A Content Provider is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device.
Launch Mode of Activity (com.ss.android.downloadlib.activity.TTDelegateActivity) is not standard.	high	An Activity should not be having the launch mode attribute set to "singleTask/singleInstance" as it becomes root Activity and it is possible for other applications to read the contents of the calling Intent. So it is required to use the "standard" launch mode attribute when sensitive information is included in an Intent.
Launch Mode of Activity (com.bytedance.jirafast.ui.JIRAReportEntryActivity) is not standard.	high	An Activity should not be having the launch mode attribute set to "singleTask/singleInstance" as it becomes root Activity and it is possible for other applications to read the contents of the calling Intent. So it is required to use the "standard" launch mode attribute when sensitive information is included in an Intent.
Launch Mode of Activity (com.bytedance.jirafast.ui.JIRACreateIssueActivity) is not standard.	high	An Activity should not be having the launch mode attribute set to "singleTask/singleInstance" as it becomes root Activity and it is possible for other applications to read the contents of the calling Intent. So it is required to use the "standard" launch mode attribute when sensitive information is included in an Intent.
TaskAffinity is set for Activity (com.tt.miniapphost.placeholder.MiniappTabActivity0)	high	If taskAffinity is set, then other application could read the Intents sent to Activities belonging to another task. Always use the default setting keeping the affinity as the package name in order to prevent sensitive information inside sent or received Intents from being read by another application.

ISSUE	SEVERITY	DESCRIPTION
Launch Mode of Activity (com.tt.miniapphost.placeholder.MiniappTabActivity0) is not standard.	high	An Activity should not be having the launch mode attribute set to "singleTask/singleInstance" as it becomes root Activity and it is possible for other applications to read the contents of the calling Intent. So it is required to use the "standard" launch mode attribute when sensitive information is included in an Intent.
TaskAffinity is set for Activity (com.tt.miniapphost.placeholder.MiniappTabActivity1)	high	If taskAffinity is set, then other application could read the Intents sent to Activities belonging to another task. Always use the default setting keeping the affinity as the package name in order to prevent sensitive information inside sent or received Intents from being read by another application.
Launch Mode of Activity (com.tt.miniapphost.placeholder.MiniappTabActivity1) is not standard.	high	An Activity should not be having the launch mode attribute set to "singleTask/singleInstance" as it becomes root Activity and it is possible for other applications to read the contents of the calling Intent. So it is required to use the "standard" launch mode attribute when sensitive information is included in an Intent.
TaskAffinity is set for Activity (com.tt.miniapphost.placeholder.MiniappTabActivity2)	high	If taskAffinity is set, then other application could read the Intents sent to Activities belonging to another task. Always use the default setting keeping the affinity as the package name in order to prevent sensitive information inside sent or received Intents from being read by another application.
Launch Mode of Activity (com.tt.miniapphost.placeholder.MiniappTabActivity2) is not standard.	high	An Activity should not be having the launch mode attribute set to "singleTask/singleInstance" as it becomes root Activity and it is possible for other applications to read the contents of the calling Intent. So it is required to use the "standard" launch mode attribute when sensitive information is included in an Intent.
TaskAffinity is set for Activity (com.tt.miniapphost.placeholder.MiniappTabActivity3)	high	If taskAffinity is set, then other application could read the Intents sent to Activities belonging to another task. Always use the default setting keeping the affinity as the package name in order to prevent sensitive information inside sent or received Intents from being read by another application.
Launch Mode of Activity (com.tt.miniapphost.placeholder.MiniappTabActivity3) is not standard.	high	An Activity should not be having the launch mode attribute set to "singleTask/singleInstance" as it becomes root Activity and it is possible for other applications to read the contents of the calling Intent. So it is required to use the "standard" launch mode attribute when sensitive information is included in an Intent.
TaskAffinity is set for Activity (com.tt.miniapphost.placeholder.MiniappTabActivity4)	high	If taskAffinity is set, then other application could read the Intents sent to Activities belonging to another task. Always use the default setting keeping the affinity as the package name in order to prevent sensitive information inside sent or received Intents from being read by another application.
Launch Mode of Activity (com.tt.miniapphost.placeholder.MiniappTabActivity4) is not standard.	high	An Activity should not be having the launch mode attribute set to "singleTask/singleInstance" as it becomes root Activity and it is possible for other applications to read the contents of the calling Intent. So it is required to use the "standard" launch mode attribute when sensitive information is included in an Intent.
Launch Mode of Activity (com.tt.miniapp.feedback.FeedbackRecordActivity) is not standard.	high	An Activity should not be having the launch mode attribute set to "singleTask/singleInstance" as it becomes root Activity and it is possible for other applications to read the contents of the calling Intent. So it is required to use the "standard" launch mode attribute when sensitive information is included in an Intent.
Service (com.ss.android.ugc.asve.sandbox.SandBoxRemoteCoreService) is not Protected. An intent-filter exists.	high	A Service is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device. The presence of intent-filter indicates that the Service is explicitly exported.
Service (com.fcm.service.SSGcmListenerService) is not Protected. An intent-filter exists.	high	A Service is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device. The presence of intent-filter indicates that the Service is explicitly exported.
Service (androidx.work.impl.background.systemjob.SystemJobService) is Protected by a permission, but the protection level of the permission should be checked. **Permission:** android.permission.BIND_JOB_SERVICE [android:exported=true]	high	A Service is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device. It is protected by a permission which is not defined in the analysed application. As a result, the protection level of the permission should be checked where it is defined. If it is set to normal or dangerous, a malicious application can request and obtain the permission and interact with the component. If it is set to signature, only applications signed with the same certificate can obtain the permission.
Broadcast Receiver (androidx.work.impl.background.systemalarm.ConstraintProxy$BatteryChargingProxy) is not Protected. An intent-filter exists.	high	A Broadcast Receiver is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device. The presence of intent-filter indicates that the Broadcast Receiver is explicitly exported.
Broadcast Receiver (androidx.work.impl.background.systemalarm.ConstraintProxy$BatteryNotLowProxy) is not Protected. An intent-filter exists.	high	A Broadcast Receiver is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device. The presence of intent-filter indicates that the Broadcast Receiver is explicitly exported.
Broadcast Receiver (androidx.work.impl.background.systemalarm.ConstraintProxy$StorageNotLowProxy) is not Protected. An intent-filter exists.	high	A Broadcast Receiver is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device. The presence of intent-filter indicates that the Broadcast Receiver is explicitly exported.
Broadcast Receiver (androidx.work.impl.background.systemalarm.ConstraintProxy$NetworkStateProxy) is not Protected. An intent-filter exists.	high	A Broadcast Receiver is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device. The presence of intent-filter indicates that the Broadcast Receiver is explicitly exported.
Broadcast Receiver (androidx.work.impl.background.systemalarm.RescheduleReceiver) is not Protected. An intent-filter exists.	high	A Broadcast Receiver is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device. The presence of intent-filter indicates that the Broadcast Receiver is explicitly exported.
Broadcast Receiver (com.ss.android.ugc.rhea.receiver.ControllerReceiver) is not Protected. [android:exported=true]	high	A Broadcast Receiver is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device.
Service (com.bytedance.common.wschannel.server.WsChannelService) is not Protected. [android:exported=true]	high	A Service is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device.
Service (com.bytedance.common.wschannel.client.WsClientService) is not Protected. [android:exported=true]	high	A Service is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device.
Content Provider (com.bytedance.common.wschannel.WsChannelMultiProcessSharedProvider) is not Protected. [android:exported=true]	high	A Content Provider is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device.
